Manufactured in Australia with BlueScope® Steel

Shapescaper Garden Edging are supplied with connector plates and fasteners. Pre-drilled holes make assembly and alignment easy. Lower profiles can be shaped on site into angled bends or flowing curves. Shapescaper Weathering steel garden edging is made using Redcor® from BlueScope® steel and is equivalent in specifications to "corten" Shapescaper galvanised steel garden edging is made using Galvabond® from BlueScope® steel.

Shapescaper Stakes and connectors feature precision pre-drilled holes that align with corresponding holes pre-drilled along the full length of all shapescaper edging. A choice of holes along each length allow for either the recommended 3 to 4 stakes per length. Lower profile stakes such as the 400mm long stake offer a choice of fastening heights than can be varied depending on the profile of the edging being installed along with the required fastener depth.

Stakes can be installed by matching up the corresponding holes in the edging and then secured by screwing in from the front. Alternatively stakes can be installed by screwing them in through the pre-drilled stake hole into any part of the edging along the back face. It is important to check that all screwed fittings are placed well under the soil level and will not cause an injury while Weeding etc. All fastening above soil level should be fitted off using the supplied rivets.
